## Preface

Nature has enormous power and intelligence behind its common daily appearance, and it is generous. The development of human society relies on natural resources in every area (both material and spiritual). We learn in it and from it, virtually as part of it. Nature-inspired systems and methods have a long history in human science and technology. For example, in the area of computer science, the recent well-known ones include the artificial neural network, genetic algorithm and swarm intelligence, which solve hard problems by imitating mechanisms in nature. Nature-inspired methods are also being quickly developed and applied in other areas. In this book, we just try to pick up a drop from the sea of nature's intelligence, and apply it in a specific area. We hope that it may inspire the readers' interest of nature's intelligence when exploring in their own areas of science and technology.

Traditional image processing methods usually take images as data sets or mathematical functions. In our idea of nature-inspired methods, images are more like the imitation of certain natural entities (such as electric charges, currents, etc.) simulated in computer. The evolutions of such virtual entities can be simulated according to corresponding natural laws and the simulation result can be studied for possible utilization in practical image processing tasks. Nowadays, nature-inspired methods in image processing have attracted more and more attention and research efforts. Physics and biology are the two main sources from which most of such methods have derived. Related work has achieved promising results in practical tasks, which indicate that it is a direction potentially leading to breakthroughs of new image analysis techniques. Methods inspired by physical electro-magnetic field make up a branch of this field, which have been successfully applied in the practical applications including: recognition of human ear, face and gait; extraction of corner, edge, and shape skeleton in images. The existing methods inspired by electro-magnetic theory generally belong to two categories: analysis of the virtual field generated by the image (such as the "force field transform") and deforming a shape or curve under the virtual force field generated by the image (such as the "active counter model").

The beginning of the research introduced in this book was in 2006, after we read a paper about "force field energy functionals for image feature extraction" (David J. Hurley, Mark S. Nixon, John N. Carter, 2002). This paper inspired our strong interest of natural analogies in image processing. Since then, we have been exploring in the area of nature-inspired image analysis for years and have published a series of papers about our original methods and results. These methods are mainly inspired by the theory of electro-magnetic field, which reveal the structure properties of the image by electro-magnetics inspired transforms. In these transforms, the formulas in electro-magnetic theory are adjusted to more generalized forms in order to suit practical image analysis tasks, and some novel viewpoints which take the image as a virtual field are presented. Several types of methods have been proposed from different aspects of field theory (vector field, scalar potential field, and field source distribution), which indicates that the physics inspired virtual field is a novel way of designing new effective image transforms.

Nature-inspired methodology itself means continuous exploration in the rich resource of the intelligence shown by nature. Therefore, this book does not mean the final conclusion of the authors' on-going work. Further promising results in both theory and practice are expected and we hope our research attempts shown in the book may inspire new ideas of others, which will surely be much more valuable than the book itself.

## Acknowledgements

The research introduced in this book is supported by WSEAS on the research topic of “Advanced Image Processing Techniques”. We are sincerely grateful to the WSEAS friends for their years of warm support in our research cooperation; we would like to say that the book is the fruit of our years of cooperation research efforts. And we heartily appreciate those who helped us through hard times in research by their warm encouragement and friendly expectation to us.

# Table of Contents

Preface	iii
Acknowledgements	iv
<b>1 Review</b>	<b>1</b>
1.1 Literature Review	1
1.2 Overview of The Book	3
<b>2 Electro-Statics Inspired Methods</b>	<b>5</b>
2.1 The Relative Potential Field Inspired by Physical Electro-Static Field	5
2.1.1 The Relative Potential Field of Gray-Scale Images	6
2.1.2 The Property of The Relative Potential Field	7
2.1.3 Image Segmentation Based on The Relative Potential Field	9
2.2 Vector Field Methods Inspired by Electro-Static Field	17
2.2.1 The Diffusing Vector Field of Gray-Scale Images	18
2.2.1.1 The Diffusing Vector Field of Gray-Scale Images	18
2.2.1.2 The Diffusing Vector Field of Images	19
2.2.1.3 The Primitive Area In The Diffusing Vector Field	22
2.2.1.4 Diffusing Centers in The Primitive Area	22
2.2.1.5 Primitive Area Extraction by The Area-Expanding Method	23
2.2.1.6 Gray-Scale Image Segmentation Based on The Primitive Area Extraction	25
2.2.2 The Compressing Vector Field of Gray-Scale Images	27
2.2.2.1 The Definition of The Compressing Vector Field	27
2.2.2.2 Additional Border Force for Compressing Vector Field in Border Regions	28
2.2.2.3 The Extraction of Region Center Points	32
2.2.2.4 The Extraction of Primitive Regions	34
2.2.2.5 Gray-Scale Image Segmentation in The Compressing Vector Field	34
2.3 Electro-Statics Inspired Source Reversing for Gray-Scale Images	36
2.3.1 The Relationship Between the Electro-Static Field and The Field Source	36
2.3.2 The Source-Reverse Transform for Digital Images	37
2.3.3 The Virtual Field Source as the Representation of Image Structure	38
2.3.4 Region Border Detection Based on The Source-Reverse Transform	41
2.3.5 The Opposite Transform From The Virtual Source to The Restored Image	42
2.3.6 Data Reduction of The Virtual Field Source	43
<b>3 Magneto-Statics Inspired Methods</b>	<b>45</b>
3.1 The Virtual Edge Current in Gray-Scale Images	45
3.1.1 The Spatial Property of The Magnetic Field Generated by Stable Currents	45
3.1.1.1 The Magnetic Field of The Current in A Straight Wire and Its Spatial Property	45
3.1.1.2 The Magnetic Field of The Current in A Closed Wire With Arbitrary Shape and Its Spatial Property	46
3.1.2 The Tangent Edge Vector for Simple Image Regions	47
3.1.2.1 The Definition of The Tangent Edge Vector	48
3.1.2.2 The Spatial Property of The Virtual Magnetic Field Generated by The Set of Tangent Edge Vectors	49
3.1.3 The Virtual Edge Current in Digital Images	52
3.1.4 Image Segmentation Based on The Virtual Edge Current	55
3.1.5 The Influence of Different Edge Intensity Thresholds on Border Formation	58
3.2 The Curling Vector Field Transform of Gray-Scale Images	60
3.2.1 The Definition of The Curling Vector	60

3.2.2	The Definition of The Curling Vector Field Transform	61
3.2.3	Image Segmentation in The Curling Vector Field	63
3.2.3.1	The Rotating Direction and Base Points of Rotating Expansion	63
3.2.3.2	Primitive Region Extraction in The Curling Vector Field	65
3.2.3.3	Real World Image Segmentation Based on The Curling Vector Field	66
3.3	The Curl Source Reversing for Digital Images	68
3.3.1	The Relationship Between The Magnetic Field and Its Field Source	68
3.3.2	The Virtual Curl Source Reversing	68
3.3.3	The Spatial Properties of The Virtual Curl Source for Digital Images	70
3.3.4	The Opposite Transform Form The Virtual Curl Source to The Restored Image	75
<b>4</b>	<b>Relative Field Method on Image Sequence Processing</b>	79
4.1	The 3D Relative Potential Field of Image Sequences	79
4.1.1	The Electro-Static Potential and Its Spatial Property	80
4.1.2	A General Form of Virtual Potential Field for Images	80
4.1.3	The Definition of 3D Relative Potential Field	81
4.2	The Spatial Characteristics of The 3D Relative Potential Field	81
4.3	3D Segmentation of Image Sequence in The Relative Potential Field	88
4.3.1	The 3D Segmentation Results for The Testing Image Sequences	88
4.3.2	The 3D Segmentation Results for The Real-World Image Sequences	93
<b>5</b>	<b>Relative Field Method on Color Image Processing</b>	129
5.1	The Definition of The Relative Potential for Color Images	129
5.1.1	A general form of virtual potential field for 2D images	129
5.1.2	The Relative Potential Field for Color Images	130
5.2	The Spatial Property of The Color Relative Potential Field	133
5.3	Color Image Segmentation in The Color Relative Potential Field	135
5.4	The Preprocessing of Brightness Normalization	141
<b>6</b>	<b>Summary and Discussion</b>	151
6.1	The Transformation Among Different Patterns (The Diffusing, Whirling, and Shrinking Patterns) of Vector Field	151
6.2	The Source-Reverse Transform and The Laplacian Operator	155
6.3	Summary	156
	References	159
	Subject Index	164

## **SUBJECT INDEX**

**A**

Ampere's Law, 68  
 Area Expanding, 65  
 Area Merging, 25

**B**

Base Point, 64  
 Biot-Savart Law, 47  
 Border Force, 28  
 Brightness Normalization, 141

**C**

Color Relative Potential, 131  
 Compressing Vector Field, 27  
 Cross Product, 76  
 Curl, 69  
 Curl Source Reverse, 69  
 Curling Vector Field, 61  
 Current Element, 46

**D**

Diffusing Center, 22  
 Diffusing Vector Field, 19  
 Divergence, 38

**E**

Electro-Static Force, 17  
 Electro-Static Potential, 5

**F**

Field Intensity, 36  
 Field Source, 36, 68

**G**

Gaussian Law, 36

**H**

Hamiltonian Operator, 36, 68

**I**

Image Compression, 43  
 Image Gradient, 37, 48  
 Image Segmentation, 9, 25, 34, 55, 63  
 Image Sequence, 79  
 Image Sequence Segmentation, 88  
 Image Structure, 23, 38, 65  
 Image Transform, 5

**L**

Laplacian Operator, 156  
 Local Image Feature, 6

**M**

Magnetic Induction, 47

**N**

Nature Inspired Method, 1

**P**

Physics Inspired Method, 1  
 Primitive Region, 34, 65

**R**

Region Merging, 14, 56  
 Region Shrinking, 34  
 Relative Field, 79  
 Relative Potential Field, 6  
 Repulsive Vector, 18  
 Right-Hand Rule, 45  
 Rotating Expansion, 65

**S**

Sobel Operator, 37, 48, 70  
 Source Reverse Transform, 37

**T**

Tangent Edge Vector, 47  
 Three-Dimensional Relative Potential, 81  
 Three-Dimensional Segmentation, 88

**V**

Vector Field Transform, 17  
 Virtual Edge Current, 45  
 Virtual Source, 37, 68

Dr. Xiaodong Zhuang is Associate Professor at the Automation and Engineering College of Qingdao University (Qingdao, China).

He received his B.Sc. and M.Sc. from the Electronics and Engineering Department of Qingdao Ocean University (Qingdao, China) and His received his Ph.D. degree from the Computer Science Department of China Ocean University (Qingdao, China).

He is also a post-doctoral researcher under the supervision of Prof. Nikos E. Mastorakis and a researcher in the WSEAS Research Department (Greece). Also he has served as a visiting researcher in the Oceanic Remote Sensing Laboratory (ORSL) of the Chinese Education Ministry since 2006 and he served as a researcher in the "Professor Partnership Program" of Nvidia Corporation in 2010.

The research interest of Dr. Xiaodong Zhuang includes image segmentation and analysis, speech processing & recognition and parallel programming. He has been in charge of several research projects supported by WSEAS Research Department, Qingdao University, Nvidia Corporation and ORSL respectively. He has published more than 50 papers in journals and conferences and 3 books. He has served as a supervisor for master students of "Signal and Information Processing" in Qingdao University since 2006. He has been an active reviewer of several International Journals ("Artificial Intelligence in Medicine", Elsevier; "Journal of Qingdao University - Natural Science Edition"; "Computers in Biology and Medicine"; "Medical Engineering and Physics"; "Biomedical Signal Processing and Control" and "Neural Computing and Applications").

Prof. Dr. Nikos E. Mastorakis is Professor at the Technical University of Sofia, Bulgaria and also Professor at the Department of Computer Science at the Military Institutions of University Education (MIUE) - Hellenic Naval Academy, Greece.

He received his B.Sc. and M.Sc. in Electrical Engineering from the National Technical University of Athens, Greece and his Ph.D. in Electrical Engineering and Computer Science from the same university.

He also received his B.Sc. in Pure Mathematics from the National University of Athens, Greece. He served as special scientist on Computers and Electronics at the Hellenic Naval Academy and taught several courses in the Electrical and Computer Engineering Department of the National Technical University of Athens (1998-1994). He has also served as Visiting Professor at the University of Exeter, School of Engineering (UK, 1998) and visiting Professor at the Technical University of Sofia (Bulgaria, 2003-2004).

The Editor of over than 200 Books and the author of 5 books, Dr. Mastorakis has published more than 600 papers in international books, journals and conferences. An active reviewer of 26 International Journals and member of the Editorial Board of 13 International Journals and Editor of International Book Series, Member of the Editorial Board of "Advances in Computation: Theory and Practice" by NOVA), Dr. Mastorakis has received several awards for his academic studies and his scientific research. He is an active researcher in Applied Mathematics and Computer Science and he is the Editor-in-Chief in many International Journals. He has organized more than 30 International Conferences, 40 Special Sessions, 3 Workshops and has given many plenary lectures. He is also member of IEEE, New York Academy of Sciences, A.F. Communications & Electronics Association and member of the American Association for the Advancement of Science.
