Preface

This book contains the proceedings of the 12th WSEAS International Conference on CIRCUITS which was held in Heraklion, Greece, July 22-24, 2008. This conference aims to disseminate the latest research and applications in Fundamental Theory of Circuits, Nanostructures and nanotechnologies, Molecular Electronics, Molecular Computing, Mixed-Mode Circuits, Electronics, Silicon Devices, Optoelectronic Devices, Circuits and Electronics for Data Conversion and S-D Modulation, Capacitor/Current Technoques, Circuits and Systems for Control and Robotic, Electron Devices for Power Technology, Electron Devices and Systems for Radar and Sonar Systems, Electronics for Signal Processing and other Applications, Circuit Implementation for Fuzzy Systems, Circuit Modelling and Scientific Computing with Applications in Science and Engineering.

The friendliness and openness of the WSEAS conferences, adds to their ability to grow by constantly attracting young researchers. The WSEAS Conferences attract a large number of well-established and leading researchers in various areas of Science and Engineering as you can see from <http://www.wseas.org/reports>. Your feedback encourages the society to go ahead as you can see in <http://www.worldses.org/feedback.htm>

The contents of this Book are also published in the CD-ROM Proceedings of the Conference. Both will be sent to the WSEAS collaborating indices after the conference: www.worldses.org/indexes

In addition, papers of this book are permanently available to all the scientific community via the WSEAS E-Library.

Expanded and enhanced versions of papers published in this conference proceedings are also going to be considered for possible publication in one of the WSEAS journals that participate in the major International Scientific Indices (Elsevier, Scopus, EI, ACM, Compendex, INSPEC, CSA see: www.worldses.org/indexes) these papers must be of high-quality (break-through work) and a new round of a very strict review will follow. (No additional fee will be required for the publication of the extended version in a journal). WSEAS has also collaboration with several other international publishers and all these excellent papers of this volume could be further improved, could be extended and could be enhanced for possible additional evaluation in one of the editions of these international publishers.

Finally, we cordially thank all the people of WSEAS for their efforts to maintain the high scientific level of conferences, proceedings and journals.

Table of Contents

CEREMONY for Prof. SIFAKIS : Opening by the Deputy Minister of National Defence of GREECE	15
<i>Ioannis Plakiotakis</i>	
KEYNOTE SPEAKER – TURING AWARD 2007	16
<i>Joseph Sifakis</i>	
Keynote Lecture I: Distributed Estimation Using Wireless Sensor Networks	18
<i>Georgios B. Giannakis</i>	
Keynote Lecture II: Tyflos : A Wearable System-Prototype for Assisting Visually Impaired	19
<i>Nikolaos G. Bourbakis</i>	
Keynote Lecture III: Algorithms for Rendering Depth of Field Effects for Synthetic Image Generation and Computational Photography	20
<i>Brian A. Barsky</i>	
Plenary Lecture I: Sliding mode technique in the task of the drive control	21
<i>Sergey Ryvkin</i>	
Plenary Lecture II: Advances in Semiconductor Devices and Their Growing Use in Electrical Circuits and Systems	22
<i>Noel Y. A. Shammas</i>	
Plenary Lecture III: Vibro-acoustic Techniques to Diagnose Complex Electromechanical Structures	23
<i>Francesco Muzi</i>	
Special Session I: DATICS'08: Design, Analysis and Tools for Integrated Circuits and Systems	24
<i>Ka Lok Man</i>	
Power System Typical Load Profiles Using a New Pattern Recognition Methodology	25
<i>G. J. Tsekouras, F.D. Kanellos, V.T. Kontargyri, E.S. Karanasiou, A..D. Salis, N. E. Mastorakis</i>	
Sliding Mode Technique in the Task of the Drive Control	32
<i>Sergey Ryvkin</i>	
Control of the Power Flow in an Energy System Based on Grid Connected with Photo Voltage Generator	41
<i>Rozanov Y.K., Kriukov K.V.</i>	
Simulation of Induction Motor Ventilation by Electric Modeling	45
<i>Mihai Iordache, Lucia Dumitriu, Nicolae Voicu, Catalin Dumitriu</i>	
Projection Method for Order Reduction of Analog Circuits	49
<i>Mihai Iordache, Lucia Dumitriu, Andrei Ilie</i>	

A Robust Design on Security Voip System over WiMAX	55
<i>Yang Jianxi, Zhang Jianwei, Wang Yuan</i>	
A High-Voltage Switching ADSL Line-Driver, with an n-Type Output Stage	60
<i>Jodie Buyle, Vincent De Gezelle, Benoit Bakeroot, Jan Doutreloigne</i>	
Development of Fluorescence Computational Algorithm for DNA Amplification	65
<i>J. H. Chien, Y. H. Chu, S. Y. Tseng, C. L. Su, T. J. Lin, D. S. Lee and P. H. Chen</i>	
A 200nV/$\sqrt{\text{Hz}}$ Noise PSD Signal-Conditioning Circuit with Sensor-Offset Cancellation	70
<i>Hirokazu Yoshizawa, Hiroyuki Saito, Atsushi Igarashi, Minoru Ariyama, Akira Takeda, Ryoichi Anzai, Toshiyuki Uchida, and Minoru Sudo</i>	
Electrical Characterisation of Dry Electrodes for ECG Recording	76
<i>Baba A., Burke M. J.</i>	
Electrical Power Transformer - Modeling, Simulation and Data Acquisition	82
<i>Valentin Dogaru Ulieru</i>	
A Second Order $\Sigma \Delta$ Modulation by Cascaded $\Sigma \Delta$ CNNs	86
<i>Masatake Hirano, Hisashi Aomori, Tsuyoshi Otakey and Mamoru Tanaka</i>	
A Coin Detection System by Coupled Printed Spiral Inductors	91
<i>Junichi Fukatani, Sho Yamaguchi, Masayuki Yamauchi, Hisashi Aomori and Mamoru Tanaka</i>	
Efficiency Optimized, EMI-Reduced Solar Inverter Power Stage	96
<i>K. H. Edlmoser, F. A. Himmelstoss</i>	
On Using Autoregressive Second Order Models for Pipeline Leak Detection	102
<i>Marllene Daneti</i>	
A Novel Single-Input-Single-Output multifunctional Filter Based on Current-Starved Pseudo-Floating Gate	108
<i>Mehdi Azadmehr, Yngvar Berg</i>	
First-Order Temperature-Compensated Total-Current Reference	113
<i>Radu Dan Mihaescu</i>	
Second-Order Temperature-Compensated Total-Current Reference	119
<i>RADU DAN MIHAESCU, MIRCEA A. CIUGUDEAN</i>	
Chaotic Behavior of the Buck-Boost Converter under Current-Mode Control	125
<i>Dan Negoitescu, Dan Lascu, Viorel Popescu, Corina Ivan</i>	
Optimal Embedded Repairing of SOC Memory	131

V.I. Hahanov, A.V. Hahanova, S.V. Chumachenko, S.S. Galagan

Switched Version of the Cockcroft-Walton Charge Pump for Driving Capacitive Loads **137**

Davor Vinko, Tomislav Svedek, Tomislav Matic

Experimental Investigation of Contact Resistance of Slotted and Perforated Bolted Busbar Connections **142**

Raina Tzeneva, Yanko Slavtchev, Nikos Mastorakis, Valeri Mladenov

A New Algorithm for Implementing BSB-Based Associative Memories **147**

Daniele Casali, Giovanni Costantini, Renzo Perfetti, Elisa Ricci

A CNN Based Algorithm for Retinal Vessel Segmentation **152**

Renzo Perfetti, Elisa Ricci, Daniele Casali, Giovanni Costantini

Static and Dynamic Classification Methods for Polyphonic Transcription of Piano Pieces in Different Musical Styles **158**

Giovanni Costantini, Massimiliano Todisco, Massimo Carota, Daniele Casali

Data Acquisition System for Heat Costs Allocation **163**

Ioan Lie, Virgil Tiponut, Ivan Bogdanov, Sabin Ionel, Catalin Daniel Căleanu

A Survey of Programmable and Dedicated Approaches in VLSI Architecture Design for Real-Time Video Processing **169**

A. Ahmad, K.K. Loo & J. Cosmas

Neuro Network Solution to the Design of a Hall Effect Current Transformer **184**

Gokhan Gokmen, Yelda Ozel, Nazmi Ekren

Unconventional Simulation tasks in OrCAD PSpice via Simulation Manager **189**

Milan Jaros, Jaroslav Kadlec, Dalibor Biolek

AC Analysis of Real Circuits with External Switching in PSpice **193**

Dalibor Biolek, Viera Biolkova, Zdenek Kolka

A Dual-Edge Triggered Phase Detector for Fast-Lock DLL **197**

Kyung Ho Ryu, Sang Kyu Park and Seong-Ook Jung

Optimal Dual Voltage Assignment Algorithm for Low Power under Timing-Constraints **202**

Yu-Cheng Lin, Cheng-Chiang Lin, Hsin-Hsiung Huang and Tsai-Ming Hsieh

On Settling Time in Electrical Circuits with Deterministic and Random Inputs **206**

Raul Ionel, Virgil Tiponut, Sabin Ionel, Ioan Lie

Multi-layer Rectangular/Non-Rectangular Obstacles-Avoiding X-Architecture Router **210**

Yu-Cheng Lin, Chia-Cheng Shih, Hung-Ming Chen

Optical Receiver with Photodiode Gain Stabilization **214**

Zdenek Kolka, Viera Biolkova

Spatial Quasineural Circuits for Electromagnetic Signals **218**

Guennadi A. Kouzaev

Modular Design of an Adaptive Analog Filter Shaped as an Identifier with CMOS of 0.5 μm **224**

Jose Perez-Carmona, Hector Perez-Meana and Juan Sanchez-Garcia

A Novel Sub-1 Volt Bandgap Reference with all CMOS **232**

Sameer Somvanshi, S.C.Bose, Anu Gupta

Optimization and process variation analysis of nano-scale transistors **238**

Denis Mamaluy, Hasanur R. Khan

Generalized Fibonacci Digital Filters **244**

CEREMONY for Prof. SIFAKIS

Opening by the Deputy Minister of National Defence of GREECE
Ioannis Plakiotakis
(Biochemical Engineer, M.Sc and Economics, M.Sc.)

<http://www.plakiotakis.gr>

Born in 1968 in Sitia, in the prefecture of Lasithi on the island of Crete. Plakiotakis studied chemical engineering at the University of Wales and obtained a Master's degree in biochemical engineering at London University with an MBA from the City University Business School of London. He worked at Eurocontrol, an inter-country Organisation that regulates Air Circulation and the flight safety in Europe. He is a member of the New Democracy Party since 1987. He was an active member of New Democracy's Student Movement (DAP) and in 1999 became Vice-president of the Local Committee of N.D. in Sitia (Crete). From 1998 to 2002 he acted as Municipal Advisor in Sitia. On January 2001 he was appointed as a permanent member of the Committee of Tourism by the President of the Hellenic Republic. He is a member of the Association of graduates of Biochemical Engineering at the University of London, as well as at the City University Business School.

Parliamentary- Governmental Activity:

- Member of Parliament's Special Permanent Committee of Protection of the Environment.
- New Democracy's Assistant Supervisor of Tourism and member of the Parliamentary Delegates of Production and Trade, Protection of Environment and Orthodoxy.
- He was elected MP of Lasithi with the N.D. in 2004 and in 2007.
- On 19 October 2007 he was appointed Deputy Minister of Defense.

KEYNOTE SPEAKER – TURING AWARD 2007

Embedded Systems – Scientific Challenges and Work Directions

Prof. Joseph Sifakis
Turing Award 2007,

**<http://www.acm.org/press-room/news-releases/turing-award-07/>
1 hour Keynote Lecture (CONFERENCE ROOM 1),
Wednesday, July 23, 16:00-17:00**

Nobel of Computing:

<http://www.cmu.edu/homepage/practical/2008/winter/nobel-of-computing.shtml>

Also: <http://www-verimag.imag.fr/~sifakis/>

Abstract: Embedded systems are components integrating software and hardware that are jointly and specifically designed to provide given functionalities, which are often critical. They are used in a very wide array of application areas - including transport, consumer electronics / electrical appliances, energy distribution, manufacturing systems, etc. Designing embedded systems requires techniques taking into account extra-functional requirements regarding optimal use of resources such as time, memory and energy while ensuring autonomy, reactivity and robustness. Jointly taking into account these requirements raises a grand scientific and technical challenge: extending Computer Science with paradigms and methods from Control Theory and Electrical Engineering. Computer Science is based on discrete computation models, which are by their nature are very different from the analytic models used in other engineering disciplines, because they do not encompass physical time and resources. We discuss the main aspects of this

challenge and their associated research directions for different areas such as modelling, programming, compilers, operating systems and networks.

Biography: Joseph Sifakis is CNRS researcher and the Founder of Verimag laboratory (<http://www-verimag.imag.fr/>), in Grenoble, France. He studied Electrical Engineering at the Technical University of Athens and Computer Science at the University of Grenoble.

Verimag is a leading research laboratory in the area of critical embedded systems. It developed the underlying theory and technology for the SCADE tool, used by Airbus for the design and validation of its critical real-time systems, and is becoming a de facto standard for aeronautics. Verimag has a lasting and strategic collaboration with ST Microelectronics, France Telecom R&D, and Airbus, through which numerous results on validation and testing have been transferred.

Joseph Sifakis is recognized for his pioneering work on both theoretical and practical aspects of Concurrent Systems Specification and Verification. He contributed to emergence of the area of model-checking, currently the most widely-used method for the verification of industrial applications. His current research activities include component-based design, modeling, and analysis of real-time systems with focus on correct-by-construction techniques (<http://www-verimag.imag.fr/~sifakis/>).

Joseph Sifakis has broad experience with industry, notably through joint projects with partners such as Astrium, the European Space Agency, France Telecom, ST Microelectronics and he has also been active for many years in consulting.

Joseph Sifakis is the Scientific Coordinator of the European Network of Excellence ARTIST2 on Embedded Systems Design. (<http://www.artist-embedded.org/>). This network gathers 35 of the best European teams in the area, and aims to produce innovative results for cost-effective design of dependable embedded systems. It will also promote innovative methods safe and secure systems, notably through cooperation with key European industrial partners such as Thalès, Airbus, Ericsson, Philips, and ST Microelectronics.

Joseph Sifakis is the chair of "Chamber B" (Public Research Organisations) of ARTEMISIA, which is the Industrial Association within the ARTEMIS European Technology Platform on Embedded Systems (<http://www.cordis.lu/ist/artemis/>).

Joseph Sifakis is the director of the CARNOT Institute "Intelligent Software and Systems" in Grenoble. Joseph Sifakis is a member of the editorial board of several journals, co-founder of the International Conference on Computer Aided Verification (CAV) and a member of the Steering Committee of the EMSOFT (Embedded Software) conference.

Joseph Sifakis has received with Ed Clark and Allen Emerson for their contribution to Model Checking, the Turing Award for 2007 (<http://awards.acm.org/homepage.cfm?srt=all&awd=140>). He is also the recipient of the CNRS Silver Medal in 2001.

Keynote Lecture I

Distributed Estimation Using Wireless Sensor Networks

Professor Georgios B. Giannakis
University of Minnesota
USA

E-mail: georgios@ece.umn.edu

Abstract: Envisioned applications of wireless sensor networks (WSNs) include surveillance, monitoring and tracking tasks. These motivate well decentralized estimation and smoothing of deterministic and (non)stationary random signals using (possibly correlated) observations collected across distributed sensors. In this talk we present state-of-the-art algorithms for consensus-based distributed estimation using ad hoc WSNs where sensors communicate over single-hop noisy links. The novel framework reformulates basic estimation criteria such as least-squares, maximum-likelihood, maximum a posteriori, and linear mean-square error, as decomposable, constrained, convex optimization problems that are amenable to distributed solutions. The resultant distributed estimators are provably convergent to their centralized counterparts and robust to communication noise. Besides stationary, the framework encompasses adaptive filtering and smoothing of non-stationary signals through distributed LMS and Kalman filtering.

Brief Biography of the Speaker: G. B. Giannakis received his B.Sc. in 1981 from the Ntl. Tech. Univ. of Athens, Greece and his M.Sc. and Ph.D. in Electrical Engineering in 1983 and 1986 from the Univ. of Southern California. Since 1999 he has been a professor with the Department of Electrical and Computer Engineering at the University of Minnesota, where he now holds an Endowed ADC Chair in Wireless Telecommunications. His general interests span the areas of communications, networking, signal processing, estimation and detection theory -- subjects on which he has published more than 270 journal papers, 450 conference papers, two research monographs and two edited books. Current research focuses on wireless networks, complex-field and space-time coding, ultra-wideband and cognitive radios, cross-layer designs and wireless sensor networks. He is the (co-) recipient of six best paper awards from the IEEE Signal Processing (SP) and Communications Societies (1992, 1998, 2000, 2001, 2003, 2004) and also received the SP Society's Technical Achievement Award in 2000 as well as the EURASIP Technical Achievement Award in 2005. He is an IEEE Fellow since 1997, a Distinguished Lecturer for 2007-08, and has served the IEEE in various editorial and organizational posts

Keynote Lecture II

Tyflos : A Wearable System-Prototype for Assisting Visually Impaired

Dr. Nikolaos G. Bourbakis

Director, Information Technology Research Institute
Wright State University, College of Engineering and Computer Science
OBR Distinguished Professor of Information Technology
Department of Computer Science and Engineering
3640 Colonel Glenn Highway
Dayton, Ohio 45435-0001
United States of America

Phone: (937) 775-5138 Fax: (937) 775-5127

E-mail: nikolaos.bourbakis@wright.edu

URL: <http://www.cs.wright.edu/itri/bourbakis/>

Abstract: *Human eyes receive more than 75% of the total information accessible to the human senses.* “There are approximately 45 million blind individuals world-wide according to the World Health Report. Vision loss can be very traumatic, leading to frustration and depression. According to the American Foundation for the Blind (AFB), the rate of unemployment among legally blind individuals of working age residing in the United States (58%) is much greater than that of individuals with no functional limitations (18%). Employment opportunities and independence are scarce for visually impaired individuals. This is unfortunate in view of the fact that ingenious devices [IEEE Spectrum] and information technology (IT) strategies can be developed to help people overcome these barriers and to pursue educational opportunities that will allow them to become productive members of society.” In this talk technological efforts are presented that have the same goal assisting and increasing the visual impaired people’s independence in their working and living environment, and reducing their social neglect. In particular, the research effort (called Tyflos) is presented here that is an IT- based wearable system-prototype. It consists of a pair of dark glasses on which two tiny vision cameras, an ear speaker and a microphone are attached. The cameras are connected with a portable computer that carries intelligent software programs. The cameras, under the user’s command, capture images from the surrounding and convert them via software programs into audio or vibrations. The current versions of Tyflos is used as 1) a reader by reading books or the blind user via audio conversion and 2) a navigation by converting 3D images into vibrations for navigation.

Brief Biography of the Speaker: Nikolaos G. BOURBAKIS (IEEE Fellow) received his PhD in computer engineering and informatics in 1983. He currently is the Associate Dean for Engineering Research, a Distinguished Professor of Informatics and the Director of the ATR Center at WSU. He has directed several research projects (Applied AI, Image Processing & Machine Vision, Visual Autonomous Navigation, Information Security, Bio-Informatics, Biomedical Engineering) funded by government and industry, and he has published near 300 papers in International refereed Journals, Conference proceedings and book-chapters. Previous working places: SUNY, IBM, UP, GMU. He is actively involved as an Associate Editor in several IEEE and International Journals and General Chair in numerous International IEEE Conferences. He is the EIC of the Artificial Intelligence Tools Int. Journal (WSP) and the new upcoming Bioinformatics Engineering Journal. He is an IEEE Computer Society Distinguished Speaker, and NSF University Research Programs Evaluator, an IEEE Computer Society Golden Core Member. He has received several high prestigious awards, some of them are: IBM Author recognition Award 1991, IEEE Computer Society Outstanding Contribution Award 1992, IEEE Outstanding Paper Award ATC 1994, IEEE Computer Society Technical Research Achievement Award 1998, IEEE I&S Outstanding Leadership Award 1998, IEEE ICTAI 10 years Research Contribution Award 1999, IEEE BIBE Leadership Award 2003, ASC Recognition Award 2005.

Keynote Lecture III

Algorithms for Rendering Depth of Field Effects for Synthetic Image Generation and Computational Photography

Dr. Brian A. Barsky

Professor of Computer Science

Affiliate Professor of Optometry and Vision Science

Member of Joint Graduate Group in Bioengineering, UCSF/UCB

Affiliate of Berkeley Center for New Media

Member of Berkeley Institute of Design

University of California, Berkeley

tel +1 (510) 642-9838

E-mail: barsky@cs.berkeley.edu

Web Page: <http://www.cs.berkeley.edu/~barsky/>

Abstract: Depth of field refers to the swath through a 3D scene that is imaged in acceptable focus through an optics system, such as a camera lens. It is a vitally important component of real photographs, and is useful as a tool for drawing the viewer's eye to the important part of the image. Depth of field is equally important for computer-generated images. This talk will provide an explanation of the phenomenon of depth of field and a survey of a variety of techniques to render depth of field effects in computer graphics, with particular attention devoted to the trade-offs between image quality and algorithm efficiency. Algorithms to render highly accurate depth of field effects, such as distributed ray tracing or the accumulation buffer, are sampling methods that use large numbers of samples, with high computational cost. Sampling is inherently slow because it effectively requires rendering the scene many times, which multiplies the render time by a potentially large factor. Faster algorithms are based on a post processing approach, which operates in image space. Post process methods operate on 2D images along with depth information, rather than working with a full 3D object representation as the sampling methods do. Consequently, post process methods struggle to accurately simulate the underlying optical process, and tend to suffer from artifacts or avoid those artifacts at a large cost. The talk will include an analysis of the nature of these artifacts.

Brief Biography of the Speaker: Brian A. Barsky is Professor of Computer Science and Affiliate Professor of Optometry and Vision Science at the University of California at Berkeley. He is a member of the Joint Graduate Group in Bioengineering, an interdisciplinary and inter-campus program, between UC Berkeley and UC San Francisco. He was a Directeur de Recherches at the Laboratoire d'Informatique Fondamentale de Lille (LIFL) of l'Université des Sciences et Technologies de Lille (USTL). He has been a Visiting Professor of Computer Science at The Hong Kong University of Science and Technology in Hong Kong, at the University of Otago in Dunedin, New Zealand, in the Modélisation Géométrique et Infographie Interactive group at l'Institut de Recherche en Informatique de Nantes and l'Ecole Centrale de Nantes, in Nantes, and at the University of Toronto in Toronto. Prof. Barsky was a Distinguished Visitor at the School of Computing at the National University of Singapore in Singapore, an Attaché de Recherche Invité at the Laboratoire Image of l'Ecole Nationale Supérieure des Télécommunications in Paris, and a visiting researcher with the Computer Aided Design and Manufacturing Group at the Sentralinstitutt for Industriell Forskning (Central Institute for Industrial Research) in Oslo. He attended McGill University in Montréal, where he received a D.C.S. in engineering and a B.Sc. in mathematics and computer science. He studied computer graphics and computer science at Cornell University in Ithaca, where he earned an M.S. degree. His Ph.D. degree is in computer science from the University of Utah in Salt Lake City. He is a Fellow of the American Academy of Optometry (F.A.A.O.). He is a co-author of the book *An Introduction to Splines for Use in Computer Graphics and Geometric Modeling*, co-editor of the book *Making Them Move: Mechanics, Control, and Animation of Articulated Figures*, and author of the book *Computer Graphics and*

Geometric Modeling Using Beta-splines. He has published 120 technical articles in this field and has been a speaker at many international meetings. Dr. Barsky was a recipient of an IBM Faculty Development Award and a National Science Foundation Presidential Young Investigator Award. He is an area editor for the journal Graphical Models. He is the Computer Graphics Editor of the Synthesis digital library of engineering and computer science, published by Morgan & Claypool Publishers, and the Series Editor for Computer Science for Course Technology, part of Cengage Learning. He was the editor of the Computer Graphics and Geometric Modeling series of Morgan Kaufmann Publishers, Inc. from December 1988 to September 2004. He was the Technical Program Committee Chair for the Association for Computing Machinery / SIGGRAPH '85 conference. His research interests include computer aided geometric design and modeling, interactive three-dimensional computer graphics, visualization in scientific computing, computer aided cornea modeling and visualization, medical imaging, and virtual environments for surgical simulation. He has been working in spline curve/surface representation and their applications in computer graphics and geometric modeling for many years. He is applying his knowledge of curve/surface representations as well as his computer graphics experience to improving videokeratography and corneal topographic mapping, forming a mathematical model of the cornea, and providing computer visualization of patients' corneas to clinicians. This has applications in the design and fabrication of contact lenses, and in laser vision correction surgery. His current research, called Vision-Realistic Rendering is developing new three-dimensional rendering techniques for the computer generation of synthetic images that will simulate the vision of specific individuals based on their actual patient data using measurements from a instrument a Shack-Hartmann wavefront aberrometry device. This research forms the OPTICAL (OPTics and Topography Involving Cornea and Lens) project.

Plenary Lecture I

Sliding mode technique in the task of the drive control

Professor Sergey Ryvkin

Leading Researcher

Trapeznikov Institute of Control Sciences of Russian Academy of Sciences

Profsoyuznaya ul. 65,
117997, Moscow/ Russia
Phone.: +7-495-3342310
Fax: +7-495-4202016
Email: rivkin@ipu.rssi.ru

Abstract: The paper aims to explain the basic ideas related to the use of sliding-mode technique for the control design for an electromechanic drive system containing an AC motor and a converter. three-level voltage-source inverter. A comprehensive investigation of possible AC motors, converters and control plant structures was carried out. Based on this analysis different original design procedures for control design and observer design are presented. It's show the possibility to use the "classical" result of sliding-mode theory for the real drive systems with more then 2m switched structures (m is the control space order). The performance of the considered control and observer structure has been examined by simulation.

Brief Biography of the Speaker: Sergey Ryvkin (IEEE - M'06, SM'07), born 1951, graduated from Moscow Institute for Aviation Engineering (Dipl.-Eng.), Moscow, Russia, in 1974, received the Ph.D Degree from the Institute of Control Sciences of USSR Academy of Sciences, Moscow, Russia, in 1986 and the Dr. Sci. (Eng.) from the Supreme Certifying Commission of Ministry of Education and Science, Moscow, Russia, in 2006. He is a Corresponding Member of the Russian Academy of Electrotechnical Sciences (2008). Today he works as leading researcher in the Trapeznikov Institute of Control Sciences of Russian Academy of Sciences and as part-time professor at the Russian State University for the Humanities, Moscow, Russia. His research interest center in Nonlinear System Control and Variable Structure Systems with Sliding Mode as applied to electrical drives and power systems control and observation, robotic control. Since 1986 he was in charge of the industrial projects between his Institute and different large Russian plants. He was granted MacArthur Foundation as an individual research (January 1994 to June 1995), German Academic Exchange Service as a visiting research (November 2006 to January 2007), Russian Foundation for Basic Research (2008) as a book writer. He has published more than 90 technical papers in international journals and conferences and has 6 invention certificates and has served as reviewer for different international journals and conferences.

Plenary Lecture II

Advances in Semiconductor Devices and Their Growing Use in Electrical Circuits and Systems

Professor Noel Y. A. Shamma

Staffordshire University

Faculty of Computing, Engineering and Advanced Technology

UK

N.Y.A.Shamma@staffs.ac.uk

Abstract: The main aim of this investigation is to assess the suitability of modern power semiconductor devices for pulse power applications. Pulse power system involves the storage of energy, which is released in form of high power pulse to the load by means of a switching device. Hence the basic components of pulse power system are an energy storage element, a switch, and a load circuit. The energy storage is usually either an inductive or capacitive nature. The limiting device in a pulse power system is often the switch, which limits the pulse peak power and the repetition rate. The switch element in this case is very special and falls into two basic categories: 1-Vacuum and gas filled switching tubes, 2- Solid-state (semiconductor) switches. The conventional approach in pulse power designs is to use spark gap and gas filled switches such as thyratron and ignitron, because they truly possess the required characteristics for high power application. However, these devices have limited lifetime, high cost, low repetition rate and high losses. On the other hand high power semiconductor devices have undergone continued improvement in switching speed, voltage and current ratings and thus are replacing the conventional gas filled devices in some applications. Solid state devices are considered environmental friendly since they do not contain nasty gases and have perceived higher reliability than gas filled devices. In this paper, a complete overview of vacuum and gas filled switches and solid-state switches will be given. Very rarely these types of power semiconductor devices are characterised for pulse power applications and so the task of dimensioning a device simply from the datasheets is somewhat difficult and time consuming. Different methods for assessing their suitability will be described and a new technique to rapidly dimension the semiconductor device for pulse power application will be presented.

Brief Biography of the Speaker: Noel Shamma is currently a Professor in Microelectronics and Solid-State Power Semiconductor Devices in the faculty of Computing, Engineering and Advanced Technology, Staffordshire University. He received the M.Sc and Ph.D degrees from Salford University in 1972 and 1975 respectively. Since then he lectured and researched at different universities and industry. Research work is primarily focused on Power Semiconductor Devices which includes mainly Power diodes, Light Emitting Diodes (LED's), Insulated Gate Bipolar Transistors and Thyristors. Other related areas of research work includes Power Module Packaging technologies (Both Conventional Press- pack and Smart pack designs) and Series/Parallel operation of high power semiconductor devices and their interaction with external circuits. Professor Shamma has extensive experience in both experimental and theoretical research work and is recognised internationally for his significant contribution to research in the field of Power Semiconductor Devices. He has published over 120 journal and conference research papers as well as several invited Keynote Lectures, and has held several research grants from funding councils, Advantage West Midlands (AWM), as well as from industry. He is a regular reviewer for many journals (including IEE Proceeding Electronic devices and systems, IEEE Transactions on power electronics, and Microelectronic Reliability) and international conferences (including the European Power Electronic conference - EPE, Microelectronic conference - MIEL, Universities Power Engineering Conference-UPEC, International Symposium Power Semiconductors-ISPS, etc...). He is a member of scientific committee for many international conferences (including MIEL, EPE, WCE, WSEAS, and Microtherm) and a steering committee member for EPE, UPEC, and ISPS international conferences. He is also a book reviewer for Prentice Hall International and McGraw Hill

Plenary Lecture III

Vibro-acoustic Techniques to Diagnose Complex Electromechanical Structures

Professor Francesco Muzi

Department of Electrical Engineering and Computer Science
University of L'Aquila
ITALY

E-mail: muzi@ing.univaq.it

Web site: <http://www.diel.univaq.it/people/muzi/>

Abstract: A diagnostics procedure based on signal processing of acoustic emissions aimed at investigating complex electromechanical structures is presented. Acquired signals emitted by a structure can be activated by either natural or artificial stimuli; when using artificial and known stimuli, that is to say, stimuli linked to a set of parameters representing “state vectors”, the diagnostic method may prove to be very accurate. Signals are processed through the following stages: acquisition, segmentation, parameterization, classification and recognition. An a priori definition of the possible classes to which the system under investigation might belong is required. By means of a consultation of a predefined digital vocabulary of possible anomalies, the analysis process establishes the statistical “closeness” of the case examined to a reference model in the vocabulary and subsequently identifies the belonging class of the apparatus under checking. If the involved physical phenomena are well known, the classification can be performed using knowledge-based techniques, otherwise statistical procedures are recommended. In the past, diagnostic processes allowed to define only the object state at the moment of the investigation; nowadays, thanks to the availability of low-cost, huge digital memories and relevant power computation, the diagnostics processes allow also to predict the residual life expectation of complex jointed structures. The proposed monitoring and diagnostic method allows a time-by-time assessment of the evolution of power system components from the installation to their life end. The normal operating apparatuses can be monitored and checked from a remote, dedicated diagnostic center where information is received directly from the field. The suggested monitoring and diagnostic system allows one to usefully schedule preventative maintenance, reduce costs, and improve the quality of electric power systems. Many complex structures were examined, and some relevant real diagnostics cases concerning power transformers, power circuit breakers, and transiting electric trains are illustrated and discussed.

Brief Biography of the Speaker: Francesco Muzi is a professor of Power Systems at the University of L'Aquila, Italy, where he has also the scientific responsibility for the Power System Group. His main research interests concern Power systems transients and dynamics, Power quality in distribution systems, Power system reliability, Electromagnetic analysis, and Power systems diagnostics and protection. In these fields, he authored or co-authored over 100 scientific papers published in reviewed journals or presented at international conferences. For his contribution on Lightning Induced Overvoltages, he received mentions in books edited by John Wiley & Sons, New York and participated to the outline of the “IEEE Guide for improving the lightning performance of electric lines”, IEEE Standards Department, New York. He has also a patent for an industrial invention, namely “Power system controlled by a microprocessor”. He is a regional chairman of the Italian National Lighting Society and was a chairman or keynote lecturer in a number of international conferences organized by ISSAT (International Society of Science and Applied Technologies) and WSEAS. He is a technical reviewer for the following international journals: IEEE Transactions on Power Delivery, Electric Power Systems Research by Elsevier Science, IET Generation, Transmission & Distribution.
